Features of ERP

Order-to-Cash

The O2C process aligned with NetSuite covers the entire order processing with the highest efficiency. It aligns the results with the point of payment from accounting log entries in books.

Audit Trail Visibility

NetSuite allows the audit trail visibility, which ensures necessary information via backtrack and clear visibility towards the trail of events with respect to its initial actions, creation of a record, user activities, data accessibility, login attempts, administrator activities, or automated system activities. This facility ensures to have a better track of the system's actions and increases accountability.

Procure-to-Pay

The procure-to-pay feature of NetSuite ERP serves as a critical component. It helps in managing the entire business process in a cloud base with a suite of global actions to ensure efficiency and universal visibility across the procure-to-pay process.

Tax Management

NetSuite has an exceptional feature to run the actions to understand, track, calculate, and pay different types of taxes according to the sales or purchase of products and services. NetSuite tax management has a robust foundation that ensures transparency, automation, and effective control and the management of tax in a global environment.

Integrated Financial Reporting

NetSuite ERP has an efficient Financial Report Builder tool; it is convenient and easy-to-use. The tool helps to create financial statements for reporting requirements. It also ensures grouping of economic data, classifications additional data in the report such as budget details.
