

Services Resource Planning

NetSuite SRP helps you complete projects more quickly, decrease accounts receivable cycles, and generate invoices accurately and efficiently, so that you can improve cash flow and eliminate revenue leakage. From Professional Services Automation (PSA) to accounting/Enterprise Resource Planning (ERP), NetSuite SRP supports the entire bid-to-bill lifecycle using its powerful Software-as-a-Service (SaaS) suite.

How our services benefit your business?

It enables better resource utilization, faster project completion, and more accurate invoices.

It streamlines your operations and drives profitability by optimizing the entire services business lifecycle.

It helps you global business management, gain real-time insights, and financial consolidation.

It supports the way your services teams work and enables productivity with any-time, anywhere web and mobile access.

It increases visibility across your business, including resources, KPIs, forecasts, and projects.

What features do we make our best of?

Project Management

An organization can never assume what actually a customer needs. Hence it is extremely important to interview a customer about all the likes and dislikes so that the actual needs can be ascertained and prioritized. Without modulating the actual needs it is arduous to serve the customer effectively and maintain a long-term deal.

Resource Management

NetSuite's Resource Management enables project managers to optimize staffing and utilization by minimizing bench and ensuring that qualified resources are working on the right projects.

Project Accounting

NetSuite Project Accounting connects project activities with company financials, helps ensure accurate accounting and billing throughout the project lifecycle, and streamlines time and expense management while providing extensive reporting capabilities.

Timesheet Management

NetSuite's customizable timesheet feature enables users to quickly and easily capture detailed timesheets, whether in the office or on the road.

Billing

NetSuite's Billing and Invoicing Management automates one-off invoices as well as complex recurring, time and project-based billing. NetSuite provides flexible billing options—based on completing project work, achieving project milestones, or according to a schedule of dates.
